## EXECUTIVE SUMMARY

The PEERS project aims to create a practitioner-driven ecosystem that supports pre-normative and standardisation processes, particularly focusing on disaster risk resilience and CBRNe (Chemical, Biological, Radiological, Nuclear, and Explosive) sectors. The Gamma release represents a critical milestone in the project, building upon the foundational work established in the Alpha release and further refined in Beta. This report outlines the technical enhancements, migration to a cloud-based infrastructure, integration of social features and improved data management capabilities in the PEERS platform.
